

# Just to let you know...

In English we looked over a reading comprehension paper 'footprints in space' and picked apart how to answer the questions really well.

In art we enjoyed looking at optical illusions and then creating our own and in science the children made and experimented with pinhole cameras

- We had a fantastic visit to INTECH and were particularly wowed by the Planetarium; the children learnt about the constellations and should be able to point some out to you if you have a look at the night sky. They also had the chance to get up close and travel around the solar system - it was great to feel so close to everything we've been learning about.
- Year 5 have all taken home a moon watch sheet; we are asking that they have a look at the moon every evening during February and record what they see, it has been beautifully bright over the last few evenings, please make sure you're having a look!
- FLUFFY was another highlight of this week, with the children taking part in a wonderful range of activities. Thank you to everyone who helped!

Many thanks!  
Bec , Henry and Mary

Group maths: We have continued to look at fractions this week, in particular how to find fractions of a given amount  
Class maths: We have been looking at rotational symmetry.

A great website for practising tables is:  
<http://www.primaryresources.co.uk/online/moonmaths.swf>  
It's got a nice topic link too!
